Data Visualization with Python

Cheat Sheet: Maps, Waffles, WordCloud and Seaborn

		1 /		
Function	Description	Syntax	Example	Visual
Folium				
Map	Create a map object with specified center coordinates and zoom level.	<pre>folium.Map(location=[lat, lon], zoom_start=n)</pre>	<pre>world_map = folium.Map() canada =folium.Map(location=[56.130,</pre>	
Marker	Add a marker to the map with custom icon, popup, and tiles	<pre>folium.Marker(location=[lat , lon], popup='Marker Popup', tiles='Stamen Toner').add_to(map)</pre>	<pre>folium.Marker(location=[556.130, -106.35], tooltip='Marker', tiles='Stamen Toner').add_to(world_map)</pre>	
	Stamen Toner Tiles as Stamen Terrain	<pre>folium.Marker(location=[lat , lon], popup='Marker Popup', tiles='Stamen Terrain').add_to(map)</pre>	<pre>folium.Marker(location=[556.130, -106.35], tooltip='Marker', tiles='Stamen Terrain').add_to(world_map)</pre>	Cast
Circle	Add a circle to the map with specified radius, color, and fill opacity.	<pre>folium.features.CircleMarker(location=[lat, lon], radius=n, color='red', fill_opacity=n).add_to(map)</pre>	<pre>folium.features.CircleMarker(location= [56.130, -106.35], radius=1000, color='red', fill_opacity=0.5).add_to(world_map)</pre>	
Chorpleth	Create a choropleth map based on a GeoJSON file and a specified data column.	<pre>folium.Choropleth(geo_data='path/to/geojson_file', data=df, columns=['region', 'value_column'], key_on='feature.properties.id', fill_color='YlGnBu', fill_opacity=0.7, line_opacity=0.2, legend_name='Legend').add_to(map)</pre>	<pre>world_map.choropleth(geo_data=world_geo, data=df_can, columns=['Country', 'Total'], key_on='feature.properties.name', fill_color='YlOrRd', fill_opacity=0.7,line_opacity=0.2, legend_name='Immigration to Canada')</pre>	
PyWaffle				
Waffle	chart based on values and categories.	<pre>plt.figure(FigureClass = Waffle,rows = 20, columns = 30, values = values) waffle_chart = waffle.Waffle(values=[value1, value2,], rows=n, columns=n)</pre>	<pre>plt.figure(FigureClass = Waffle,rows = 20, columns = 30, values = df_dsn['Total'], cmap_name = 'tab20', legend = {'labels': label,'loc': 'lower left', 'bbox_to_anchor':(0,-0.1),'ncol': 3})</pre>	Denmark (3901) Norway (232
Legend	Add a legend to the waffle chart.	<pre>waffle_chart.legend(loc='upper left', bbox_to_anchor=(1, 1))</pre>		
Title	Add a title to the waffle	waffle_chart.set_title('Waffle Chart Title')		

WordCloud

Labels

Add labels to

the waffle

chart.

waffle_chart.set_labels(['Label 1', 'Label 2',

16/03/2024, 14:11 about:blank

Function Description Syntax Visual **Example**

Create a word

WordCloud cloud object based on text

wordcloud = WordCloud().generate(text_data)

data

alice_wc = WordCloud(background_color='white', max_words=2000, mask=alice_mask, stopwords=stopwords)

Generate the word cloud

Generate wordcloud.generate(text_data) based on the

text data. Display the word cloud

using plt.imshow(wordcloud, interpolation='bilinear') Display matplotlib or

other plotting libraries. Set various

options for the wordcloud =

WordCloud(font_path='path/to/font_file',
background_color='white',
colormap='Blues', mask=mask_image, word cloud, **Options**

such as font, colors, mask, stopwords=stopwords).generate(text_data)

and stopwords.

Seaborn

Create a bar plot to visualize the

relationship sns.barplot(x='x_variable', y='y_variable', between a

barplot

categorical variable and a numeric variable.

Create a count plot to display the frequency

countplot of each

sns.countplot(x='category', data=dataframe)

category in a categorical variable. Create a scatter plot with a

linear regression line

regression line to visualize the y='y_variable', data=dataframe) regplot

relationship between two numeric variables.

alice_wc.generate(alice_novel)
plt.imshow(alice_wc,
interpolation='bilinear')

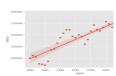

sns.barplot(x='Continent', y='Total', data=df_can1)

sns.countplot(x='Continent', data=df_can)

data=df_tot)

sns.regplot(x='year', y='total',
