SQL Cheat Sheet: Views, Stored Procedures and Transactions

Views

| Topic	Syntax	Description	Example
Create View	`CREATE VIEW view_name AS SELECT column1, column2, ... FROM table_name WHERE condition;`	A `CREATE VIEW` is an alternative way of representing data that exists in one or more tables.	`CREATE VIEW EMPSALARY AS SELECT EMP_ID, F_NAME, L_NAME, B_DATE, SEX, SALARY FROM EMPLOYEES;`
Update a View	`CREATE OR REPLACE VIEW view_name AS SELECT column1, column2, ... FROM table_name WHERE condition;`	The `CREATE OR REPLACE VIEW` command updates a view.	`CREATE OR REPLACE VIEW EMPSALARY AS SELECT EMP_ID, F_NAME, L_NAME, B_DATE, SEX, JOB_TITLE, MIN_SALARY, MAX_SALARY FROM EMPLOYEES, JOBS WHERE EMPLOYEES.JOB_ID = JOBS.JOB_IDENT;`
Drop a View	`DROP VIEW view_name;`	Use the `DROP VIEW` statement to remove a view from the database.	`DROP VIEW EMPSALARY;`

Stored Procedures in IBM Db2 using SQL

Stored Procedures	`--#SET TERMINATOR @ CREATE PROCEDURE PROCEDURE_NAME`
	
	`LANGUAGE`
	
	`BEGIN`
	
	`END`
	`@`
		A stored procedure is a prepared SQL code that you can save, so the code can be reused over and over again.
		
		The default terminator for a stored procedure is semicolon(;). To set a different terminator we use `SET TERMINATOR` clause followed by the terminator such as '@'.
			`--#SET TERMINATOR @ CREATE PROCEDURE RETRIEVE_ALL`
			
			`LANGUAGE SQL`
			`READS SQL DATA`
			
			`DYNAMIC RESULT SETS 1`
			`BEGIN`
			
			`DECLARE C1 CURSOR`
			`WITH RETURN FOR`
			
			`SELECT * FROM PETSALE;`
			
			`OPEN C1;`
			
			`END`
			`@`

Stored Procedures in MySQL using phpMyAdmin

Stored Procedures	`DELIMITER //`
	
	`CREATE PROCEDURE PROCEDURE_NAME`
	
	`BEGIN`
	
	`END //`
	
	`DELIMITER ;`
		A stored procedure is a prepared SQL code that you can save, so the code can be reused over and over again.
		
		The default terminator for a stored procedure is semicolon (;). To set a different terminator we use `DELIMITER` clause followed by the terminator such as $$ or //.
			`DELIMITER //`
			
			`CREATE PROCEDURE RETRIEVE_ALL()`
			
			`BEGIN`
			
			`SELECT * FROM PETSALE;`
			
			`END //`
			
			`DELIMITER ;`

Transactions with Db2

Topic	Syntax	Description	Example

Commit command	`COMMIT;`	A `COMMIT` command is used to persist the changes in the database.
		
		The default terminator for a COMMIT command is semicolon (;).
			`CREATE TABLE employee(ID INT, Name VARCHAR(20), City VARCHAR(20), Salary INT, Age INT);`
			
			`INSERT INTO employee( ID, Name, City, Salary, Age) VALUES( 1, 'Priyanka pal', 'Nasik', 36000, 21), (2, 'Riy 'Bangalor', 82000, 29);`
			
			`SELECT *FROM employee;`
			`COMMIT;`

Rollback command	`ROLLBACK;`	A `ROLLBACK` command is used to rollback the transactions which are not saved in the database. The default terminator for a ROLLBACK command is semicolon (;).	As auto-commit is enabled by default, all transactions will be committed. We need to disable this opti see how rollback works. For db2, we have to disable auto-commit manually. Click the gear icon located on the right side of the Assistant window. Next, select the "On Success" drop-down and choose "commit after the last statement script" Remember to save your changes!

```
INSERT INTO employee VALUES (3, 'Swetha Tiwari', 'Kanpur', 38000, 38);

SELECT *FROM employee;
ROLLBACK;
SELECT *FROM employee;
```

Transactions with MySQL

| | | | ```
CREATE TABLE employee(ID INT, Name VARCHAR(20), City VARCHAR(20), Salary INT, Age INT);

START TRANSACTION;

INSERT INTO employee( ID, Name, City, Salary, Age) VALUES( 1, 'Priyanka pal', 'Nasik', 36000, 21), (2, 'Riya chowdary', 'Bangalor', 82000, 29);

SELECT *FROM employee;
COMMIT;
``` |
| Commit command | `COMMIT;` | A `COMMIT` command is used to persist the changes in the database.

The default terminator for a COMMIT command is semicolon (;). | |
| | | | As auto-commit is enabled by default, all transactions will be committed. We need to disable this option to see how rollback works. For MySQL use the command "SET autocommit = 0;" |
| Rollback command | `ROLLBACK;` | A `ROLLBACK` command is used to rollback the transactions which are not saved in the database.<br><br>The default terminator for a ROLLBACK command is semicolon (;). | ```
INSERT INTO employee VALUES (3, 'Swetha Tiwari', 'Kanpur', 38000, 38);

SELECT *FROM employee;
ROLLBACK;
SELECT *FROM employee;
``` |

Db2 Transactions using Stored Procedure

| | | | ```
--#SET TERMINATOR @ CREATE PROCEDURE TRANSACTION_ROSE LANGUAGE SQL MODIFIES SQL DATA

BEGIN

DECLARE SQLCODE INTEGER DEFAULT 0;
DECLARE retcode INTEGER DEFAULT 0;
DECLARE CONTINUE HANDLER FOR SQLEXCEPTION
SET retcode = SQLCODE;
``` |
| Commit command | ```
--#SET TERMINATOR @

CREATE PROCEDURE PROCEDURE_NAME

BEGIN

COMMIT;

END
@
``` | A `COMMIT` command is used to persist the changes in the database.<br><br>The default terminator for a COMMIT command is semicolon (;). | ```
UPDATE BankAccounts
SET Balance = Balance-200
WHERE AccountName = 'Rose';

UPDATE BankAccounts
SET Balance = Balance-300
WHERE AccountName = 'Rose';

IF retcode < 0 THEN
ROLLBACK WORK;

ELSE
COMMIT WORK;

END IF;

END
@
``` |
| Rollback command | ```
--#SET TERMINATOR @

CREATE PROCEDURE PROCEDURE_NAME
``` | A `ROLLBACK` command is used to rollback the transactions which are not saved in the database. | ```
--#SET TERMINATOR @ CREATE PROCEDURE TRANSACTION_ROSE LANGUAGE SQL MODIFIES
``` |

```
BEGIN

ROLLBACK;

COMMIT;

END
@
```

The default terminator for a ROLLBACK command is semicolon (;).

```
SQL DATA

BEGIN

DECLARE SQLCODE INTEGER DEFAULT 0;
DECLARE retcode INTEGER DEFAULT 0;
DECLARE CONTINUE HANDLER FOR
SQLEXCEPTION
SET retcode = SQLCODE;

UPDATE BankAccounts
SET Balance = Balance-200
WHERE AccountName = 'Rose';

UPDATE BankAccounts
SET Balance = Balance-300
WHERE AccountName = 'Rose';

IF retcode < 0 THEN
ROLLBACK WORK;

ELSE
COMMIT WORK;

END IF;

END
@
```

MySQL Transactions using Stored Procedure

Commit command	```DELIMITER //``` ``` ``` ```CREATE PROCEDURE PROCEDURE_NAME``` ``` ``` ```BEGIN``` ``` ``` ```COMMIT;``` ``` ``` ```END //``` ``` ``` ```DELIMITER ;```	A `COMMIT` command is used to persist the changes in the database. The default terminator for a COMMIT command is semicolon (;).	```DELIMITER //``` ``` ``` ```CREATE PROCEDURE TRANSACTION_ROSE()``` ``` ``` ```BEGIN``` ``` ``` ```DECLARE EXIT HANDLER FOR SQLEXCEPTION``` ```BEGIN``` ```ROLLBACK;``` ```RESIGNAL;``` ```END;``` ``` ``` ```START TRANSACTION;``` ```UPDATE BankAccounts``` ```SET Balance = Balance-200``` ```WHERE AccountName = 'Rose';``` ``` ``` ```UPDATE BankAccounts``` ```SET Balance = Balance-300``` ```WHERE AccountName = 'Rose';``` ``` ``` ```COMMIT;``` ``` ``` ```END //``` ``` ``` ```DELIMITER ;```
Rollback command	```DELIMITER //``` ``` ``` ```CREATE PROCEDURE PROCEDURE_NAME``` ``` ``` ```BEGIN``` ``` ``` ```ROLLBACK;``` ``` ``` ```COMMIT;``` ``` ``` ```END //``` ``` ``` ```DELIMITER ;```	A `ROLLBACK` command is used to rollback the transactions which are not saved in the database. The default terminator for a ROLLBACK command is semicolon (;).	```DELIMITER //``` ``` ``` ```CREATE PROCEDURE TRANSACTION_ROSE()``` ``` ``` ```BEGIN``` ``` ``` ```DECLARE EXIT HANDLER FOR SQLEXCEPTION``` ```BEGIN``` ```ROLLBACK;``` ```RESIGNAL;``` ```END;``` ``` ``` ```START TRANSACTION;``` ```UPDATE BankAccounts``` ```SET Balance = Balance-200``` ```WHERE AccountName = 'Rose';``` ``` ``` ```UPDATE BankAccounts``` ```SET Balance = Balance-300``` ```WHERE AccountName = 'Rose';``` ``` ``` ```COMMIT;``` ``` ``` ```END //``` ``` ``` ```DELIMITER ;```
